

# MPW - MAXI CLEANERS

**- unique solutions within the  
KEN Maxi Cleaner delivery program**

# MPW MAXI CLEANERS

## Field of application

The KEN MPW Maxi Cleaners have been developed in close co-operation with the end users of the equipment which is washed in these types of machines. The machines are well suited for a range of industries, for example, the food processing industry, where the MPWs are one of the best choices for washing equipment used in the production of:

- Snacks
- Fast-foods
- Seafood
- Cheese products
- Cereals

## MPW 25 and MPW 50

The KEN MPW Maxi Cleaners offer unique options to meet individual requirements.

The MPW series consists of two models, the MPW 25 and the MPW 50, both of which meet the normal requirements of a modern production company for a superior wash quality and maximum flexibility. In addition both models are economically and environmentally sustainable solutions.

## Capacity according to requirements

The MPW 25 is the best solution if the washing machine is to be placed close to the production equipment that has to be washed. This achieves efficiency and considerable time savings. With a wash chamber of approx. 2.5 m<sup>3</sup> the MPW 25 is a very flexible solution in a compact design.

With a wash chamber of 5 m<sup>3</sup>, which easily holds 2 or 3 trolleys or similar equipment that is placed directly in the machine, the MPW 50 is a perfect solution for larger washing requirements. This ensures the necessary capacity for fast and efficient washing of even very large quantities of goods.

Apart from the difference in capacity, the MPW 25 and the MPW 50 are identical solutions as regards flexibility, optimum hygiene and wash quality, advanced technology, and cost and environmental advantages.

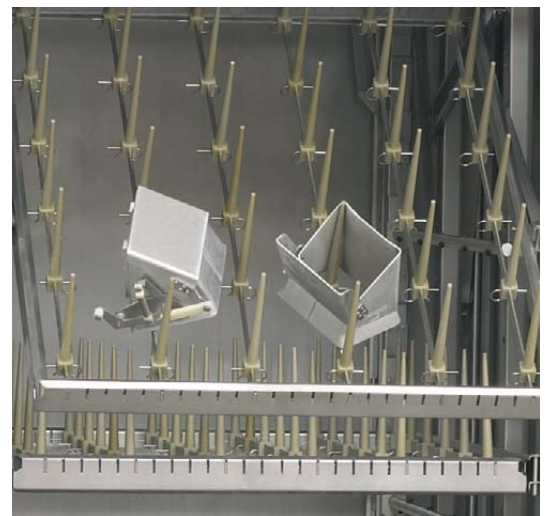

## Functional flexibility

The KEN MPWs are equipped with a unique Rack and Spike system, which enables you to adjust the machine to hold different items as required in just a few minutes. In addition, the capacity of the wash chambers adds to the flexibility of both machines.

## Hygiene and washing efficiency

By means of the effective washing and rinsing systems where the surface temperature of the items is raised to 85°C, you achieve the highest possible level of hygiene with germ counts below a detectable level.

The movable washing system with rotating wash pipes ensures that all items are washed from all angles. The KEN MPWs ensure the user an extremely high and always uniform washing quality.

## - unique solutions within the KEN Maxi Cleaner delivery program

### Computer controlled functions

The KEN MPW washing machines are computer-controlled and in standard operation they have nine washing programs. Each program has up to six steps where all parameters can be set individually. This means you can choose the exact program for your individual needs.

### Economic and environmental benefits

To reduce the water consumption, clean water is re-circulated at each stage of the complete washing cycle. Both machines are able to adjust the quantity of water that is required for the actual job. This ensures low consumption of water and consequently a low consumption of detergent and power. In other words the KEN MPWs are profitable investments – economically as well as environmentally.

### MPW 25 and MPW 50 benefits for the user – an overview

Gentle washing with an extremely high and always uniform washing quality.

Improved hygiene – germ counts below a detectable level

Fast washing cycle

#### High capacity

- 2.5 cubic metres (MPW 25) and 5 cubic metres wash chamber (MPW 50) available

#### High flexibility

- It is possible to arrange the wash chamber of both machines to suit your individual needs

#### Low energy costs

- low consumption of water and electricity

#### Environmentally friendly

- low consumption of detergent

## Focus on values - local and global

KEN A/S is a forward looking, hi-tech Danish company built on the core values of:

- good, flexible relations with customers
- skilled and well-trained personnel
- a product range which is up-to-date and relevant to the market

We draw the motivation for our daily work from working with our customers, both in Denmark and abroad. We listen to their needs and requirements, we give advice and follow up on deliveries as well as providing the service that our customers want.

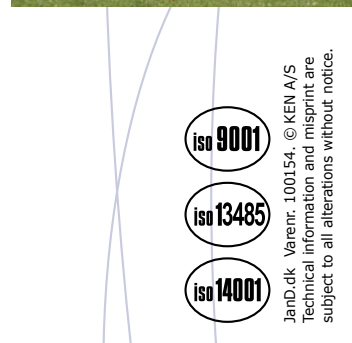

A well-running and trusting relationship between us and our customers is of the highest importance – for both parties.

Right from the very start, over 60 years ago, KEN has considered its employees to be the most valuable resource it has. In a spirit of mutual respect, cooperation and constant development we aim to be an attractive

place to work and to provide a solid foundation for a thriving and stable life – both at work and outside.

Today KEN is amongst the absolute leaders both on the home market and in a large number of export markets. We develop, produce and sell disinfecting washers and tray washers to the health sector, as well as washers for commercial kitchens and the food processing industry. Our research into new possibilities and the development of new products using environmentally friendly, efficient and reliable systems will consolidate and expand KEN's position in the markets of tomorrow.

**We make a difference – both locally and globally**
